

**AMENDMENTS TO THE CLAIMS**

---

1. (Currently Amended) A system for providing a pilot of an airplane equipped with an Electronic Flight Instrument System (EFIS) data output port with a display of primary flight instruments that can be viewed while the pilot's eyes are focused at infinity through the aircraft windshield, comprising:

a computer;

means for connecting the computer to said ~~an electronic flight instrument system~~ data output port on the aircraft's instrument panel; and an eyeglass mounted, clip-on, display operative to receive the output of the computer,

ai the computer being operative to process the information from the electronic flight instrument system outlet port into a single display, focused at infinity, which incorporates outputs from all of the principal flight instruments.

2. (Original) The system of claim 1 wherein the display is in the form of a primary flight display.

3. (Original) The system of claim wherein the eyeglass mounted display constitutes a liquid crystal display.
